Technologies

EPS:

Most Briko helmets have an internal shell of Sintered Expanded Polystyrene (EPS) which has the purpose of absorbing impacts ensuring the right protection. In fact this material, combining lightness and safety, is endowed with an excellent resistance to impacts thanks to its elastic structure which allows a great amount of energy absorption. Furthermore, its closed cell structure makes it an excellent thermal insulator

3D ROLLFIT:

It is the new Briko adjustment system that allows a perfect fit of the helmet to the neck. It can be controlled both horizontally and vertically, for maximum comfort. In fact, a micrometric wheel allows the horizontal adjustment of the system so that the fit is enveloping and stable, while the graduated central branch allows a deep vertical excursion preventing the helmet from undermining even in the event of impact and guaranteeing a precise and individual fit.

IN-MOLD CONSTRUCTION:

The in-molding technology makes it possible to couple the outer shell of the polycarbonate (PC) helmet with the EPS inner shell in a single molding operation.

The helmets made with this technology are extremely light and impact resistant, ensuring reliability and safety.

MICROMETRICAL BUCKLE:

The ergonomics of the helmet is also ensured by the micrometric closure consisting of a main body with a red visible strap and a graduated strip.

Its construction allows a quick and easy adjustment combined with a practical hook / unhook even with ski gloves. In a single device there is a regulation system and a simple and intuitive closure.

MAGNETIC BUCKLE Fidlock:

The Fidlock magnetic closure is a fast, convenient and safe locking system. Even wearing gloves can be opened quickly and effortlessly with one hand. Unlike traditional buckles, there is no risk of the fastener pinching the skin.

VENTURI SYSTEM:

The Venturi system exploits the shape of the wide front openings to speed up the internal air change of the helmet and make it flow more quickly from the rear ventilation holes. If the incoming air increases its speed, the extraction of the air inside the helmet occurs much more quickly and efficiently, guaranteeing a thermoregulation higher than the normal standards.

MICROARMOR

Microarmor helps reduce the exposure to and the spreading of microorganisms, bacteria, fungi and algae. Water-based polymer dries clear and odorless on any surface to protect it from dirt and grime built up, and can help to reduce exposure to bacteria, fungi and other microorganisms for several months.

INTEGRATED LEDS:

Inside the shell is a system of both front and rear LEDS that allow the cyclist to be visible in any situation. The system is rechargeable via USB charger.

ROLLFIT LED:

Light with different lighting modes located inside the caster of the rear adjustment system to increase the user's visibility even in the dark.

CLIP-ON LED:

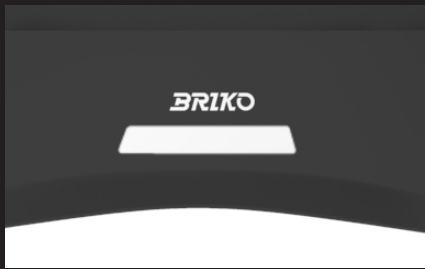

The Ax child helmet features a light designed to clip into the rear slit of the helmet to ensure maximum visibility along the road. The light, with 3 lighting modes, is rechargeable via USB.

Technologies

NTA 8776 CERTIFICATION:

NTA 8776 is the first safety certification for e-bike helmets. Helmets that pass NTA impact tests are certified for higher velocity and are able to dissipate more impact energy should you have than a traditional helmet. In addition, they have 10% more surface area tested, covering the two most sensitive brain areas, the nape and temples.

REFLECTIVE STICKERS:

The helmets are equipped with reflective stickers to increase the safety of cyclists and ensure their visibility even when riding at night or in low light conditions. These types of stickers reflect light from cars and vehicles, making it easier for drivers to see cyclists on the road.

QUASAR 2.0**25111EW**

A90 MATT SHINY BLACK

QUASAR is characterized by a low aerodynamic resistance. The different ventilation holes and the internal channels allow the rapid dissipation of heat and humidity, improving performance without neglecting safety. In fact the upper area is reinforced with an internal structure in Nylon ST 801 which increases the protection against impacts. QUASAR is built with a Full molding technology to create a total polycarbonate coating: upper shell, base ring, back shell are joined to the polystyrene inner shell ensuring better shock absorption.

Aerodynamics and ventilation are the two key elements in the development of the MACH 4 helmet.

The MACH 4 helmet, ideal for triathlon and road cycling, is designed to be used all year round in all weather conditions.

The helmet shell, almost entirely closed, favors aerodynamics; however, thanks to the front holes and the circuit of internal air channels, MACH 4 maintains and ensures excellent ventilation.

URBAN
HELMETS

A90 MATT SHINY BLACK

The perfect helmet for the city. E-ONE LED 2.0 is the ideal helmet for those who intend to travel a few kilometers a day by bike to go to work or school in total safety. Compact, aerodynamic and NTA certified to satisfy all those who use not only normal bicycles, but also the increasingly popular e-bikes. E-ONE LED integrates inside the shell a rechargeable LED system, front and rear, which allow the cyclist to be visible in every situation. It is made with Full in-molding technology, to create a total polycarbonate coating around the internal polystyrene shell, ensuring extreme lightness and impact resistance. In addition, the internal padding with antibacterial treatment and Briko's micrometric roll fit allow for a snug and stable fit.

- FRONT AND REAR MICRO-USB RECHARGEABLE LED LIGHT (charger not included)
- ADJUSTMENT SYSTEM HORIZONTAL AND VERTICAL (MICROMETRICAL)
- PADDING WITH MICROARMOR ANTI-BACTERIA TREATMENT

OVER is a safe and protective MTB helmet on the trails, but also light and ventilated. Ventilation is guaranteed by numerous and large air holes, also present on the visor, and by internal channels. A large amount of incoming air passes through the channels through the shell and the accumulated heat is expelled keeping the head cool.

OVER has a wide coverage in the occipital area and temples as they are the areas most at risk during an impact.

The visor is adjustable in two positions ensuring full compatibility with sunglasses and goggles.

KOMI is a modern and light eyewear, suitable for all uses.

The cylindrical lens offers ample protection from both UV rays and atmospheric agents, while maintaining an excellent ventilation ratio thanks to the half frame construction.

The adjustable temples and the animated nose make this model perfectly adaptable to every face, and comfortable to use under the helmet.

Made of TR90, the frame is designed to withstand any impact that may occur during use, protecting the user from minor accidents that can occur during a sporting performance.

SPACE is an innovative frame that combines the lightness of racing models but offers the protection of more off-road models. The glasses are characterized by an elegant single-lens front shape, with aerodynamic nose pad and removable TR90 profiles to further increase visibility. The thin temples with graphic details give this shape its unique touch, while the tires and tech lenses ensure top-notch performance. To offer the same performance to every athlete, this model is included with an optical adapter to use the prescription lenses.

STARLIGHT 2.0 3 LENSES

28111CW

A22 BLACK DUNE - SM3TOY1

The goal for this model was to create the simplest eyewear possible. Make it as easy as possible to change lenses, reduce weight as much as possible, offer the widest field of vision. Thus, was born STARLIGHT 2.0 3 LENSES, a rimless model equipped with an exclusive quick-release lens mechanism to allow maximum ease of use, silicone nose pads adjustable in 3 positions, anti-slip rubber temple tips. The wide lens with an ergonomic shape allows an incomparable vision both superior and perimeter, not blocking your view in any direction. This model included three sun lenses, the first mirrored in category 3 to protect from sunlight, the second in category 1 and yellow in the most adverse weather conditions and the third, clear category 0 to allow you to run too at night.

TR90 full frame biocular glasses, ideal for offering optimal protection from the sun and external atmospheric agents.

The particularly enveloping fit, combined with the super flexible temples make it a comfortable but firm eyewear on the face. Furthermore, the rubber inserts both on the temples and on the nose increase the feeling of comfort and increase the anti-slip capacity of this model.

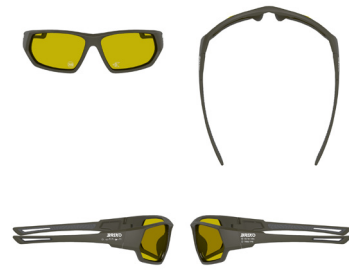

Finally, the mirrored polycarbonate lenses with metallic colors add a captivating aesthetic to the model.

BOOST

CODE

28112GW

A0T BLACK-SM3

BOOST is a silhouette that blends high-end technical performance with urban street aesthetics. The first impact is that of an aggressive, modern eyewear, with strong lines and a well-defined character. At a second glance, however, it reveals sophisticated technical details, such as the wraparound temples, the translucent acrylic frame of the lenses and the soft rubber that offers comfort for prolonged use.

This model, thanks to the lens release mechanism, offers the possibility of being customized with prescription lenses.

TONGASS

CODE

251178W

AOG BLACK - SM3

With its sinuous shapes, inspired by mountain roads, TONGASS was created to follow the user in any adventure.

The spherical lens accompanies the shape of the face, reducing the likelihood of visual aberrations, while the frame opens giving space to the large ventilation holes that ensure comfortable use.

The Full Revo interchangeable lens ensures complete protection from UV rays, and the anti-fog treatment prevents moisture from accumulating on the lens.

The durable TR90 frame with adjustable nose is designed for maximum grip, enhanced by fully adjustable temples covered with soft rubber.
